Reviewed in *New York Review of Books* by **Sue Halpern**, "Private Eyes," March 9, 2023

> Citron's most radical—and most aspirational—idea, and the one that is central to her thinking, is for what she calls "intimate privacy" to be considered, by law, a civil right, "understood as both a basic entitlement and an antidiscrimination mandate."

Excerpted in *Wired Magazine*, "The US Needs to Recognize Intimate Privacy as a Civil Right," October 5, 2022.

Featured in *The Guardian (UK)*, in Laurie Clarke, "Privacy is essential to human flourishing," October 2, 2022.

Featured in *Prospect Magazine* (UK) in Lois Heslop, "Tech giants can't ignore privacy violations," November 7, 2022.

Featured in *The Times (UK)* in Kit Wilson, "The Fight for Privacy by Danielle Keats Citron review," October 11, 2022.

"Warren and Brandeis's 1890 article 'A Right to Privacy' is often described as the most influential law review ever written. With her intellectual erudition and commitment to privacy as a force

for good, Citron is the Warren and Brandeis of her generation. What gives her the edge is a real-world understanding of privacy's relationship to diverse permutations of power and her ambition to address the disproportionate impact of violations on women and minorities." **– Jessica Lake**, *Australian Book Review*

"From how social networks sell our data to retailers (and worse) to the concern around period-tracking apps being used against pregnant people, the fight for privacy has never been more fierce. Danielle Keats Citron, a law professor at the University of Virginia and vice president of the Cyber Civil Rights Initiative, suggests that privacy as we knew it is already gone, that doesn't mean we should give up. Drawing from interviews with victims, activists, and lawmakers, Citron calls for a reassessment of privacy as a human right and how we can better protect our future privacy."**– Rachel King**, *Fortune*

[…] Anyone who is deeply involved with using the internet in any form should pick up this book. It is important for everyone to understand how intimate privacy violations affect its victims and why the fight to make a change needs to happen as people continue to live their lives online."**– Leah Fitzgerald**, *The Library Journal*

"UVA law professor Citron (Hate Crimes in Cyberspace) warns in this persuasive and impassioned call for substantive legal protections for private data that "memories of our intimate lives are being created against our will by perpetrators who intrude on the seclusion that we expect, want and deserve."[…] **– Publishers Weekly**

"Citron's book provides a legal pathway for securing our right to intimate privacy in the digital era and for recognizing that it is as crucial as our other civil liberties—no more, no less. With Roe v. Wade overturned and the potential for women's intimate data to be used to investigate or prosecute potential abortion cases, such legal clarity is more urgent than ever." **– Rhoda Feng,** *Washington Monthly*

"Citron's detailed, carefully argued recommendations include the application of civil rights laws to privacy violations, much tighter regulation of the tech industry, an expansion of the range of criminal law, stricter enforcement of existing laws, and the cultivation of political support by raising public awareness about the urgent need for change. Such interventions, Citron makes clear in this timely and compelling book, might help forge a "new compact for social norms. An informed, bracing call to action in defense of our private selves." –Starred *Kirkus* review

"*The Fight for Privacy* is ultimately a call to action for activists, the public, and, most important, lawmakers. In that aim it is remarkably effective and, perhaps just as important, deeply human. In grounding what is ultimately an argument about law and policy, Citron's book works to reframe the conversation about privacy from one concerned with abstract data to our most intimate selves. The digital self is constitutive of the human person, Citron argues, so it's time for the law to catch up and protect it." **—Navneet Alang,** *Stanford Social Innovation Review*

"Privacy is politics, and if we want it back we must fight for it. In this open-hearted and down-to-earth book, Danielle Keats Citron offers reasons for optimism among the ruins of our once-cherished privacy. Lawmakers and citizens alike, this book is for you." **—Shoshana Zuboff**, author of *The Age of Surveillance Capitalism*

"It's so refreshing to read an argument for privacy that centers women. Devastating and urgent, this book could not be more timely." **—Caroline Criado Perez,** author of *Invisible Women*

"A tour de force. Citron offers trenchant clarity and lucid hope for achieving justice in our digital future." — **Kate Manne**, author of *Entitled* and *Down Girl*

"Danielle Keats Citron—the brilliant, ground-breaking law professor and civil rights advocate—continues her important and impactful work in helping governments, society, and the titans of the technology sector to understand that our collective failure to protect our intimate privacy amounts to a massive failing to protect our basic civil rights. Through heartbreaking accounts from victims, a careful and detailed exposition of how a range of technologies are being weaponized against us, and a detailed review of the ethical and legal landscape governing these issues, The Fight for Privacy is a must read by anyone who cares about civil rights." – **Hany Farid**, University of California, Berkeley

"This is a terrific, though terrifying, exposé about how often our intimate activities and intimate information end up on social media. Professor Danielle Keats Citron makes a compelling case for a 'right to intimate privacy' under the law. This beautifully written book deserves a wide audience and hopefully will inspire needed meaningful change in the law." – **Erwin Chemerinsky**, Dean and Jesse H. Choper Distinguished Professor of Law, University of California, Berkeley School of Law

"When your wristwatch monitors your location and your health status and your window-shopping and purchases generate information sold and combined with other information about you, the accumulation of 'little assents' produces constant surveillance, risks of manipulation, and the elimination of privacy. Danielle Keats Citron's expert and engaging treatment of 'technology-enabled privacy violations' shows why victims, digital platforms, and legislators alike turn to her for advice and for fights to reclaim privacy morally, legally, and practically." – **Martha Minow**, former Dean, Harvard Law School

"Danielle Keats Citron has given us a crucial book for understanding the crisis of privacy invasion, and the unrelenting damage that comes from intimate, nonconsensual surveillance. This book should be required reading for every policy maker, parent, or person who wants to reimagine privacy protections. If you care about anyone, anywhere, you should read this book." – **Safiya Noble**, author of *Algorithms of Oppression*

Reviewed by Erwin Chemerinsky in the *Chronicle of Higher Education*, Martha Nussbaum in *The Nation*, Robin West in *Jotwell*, Carrie Goldberg of Carrie Goldberg and Associates, Helen Fenwick, Michelle Goldberg, and many others:

"Vividly written and carefully argued, the book is a fine account of law in this area… We should, as Citron argues, reject the facile romanticization of the Internet as the last frontier of true freedom. We should acknowledge that the Internet both facilitates expression and silences, both allows speech and muzzles it… The major contribution of Citron's book is its lucid summary of the vast network of laws, both state and federal, that are pertinent to cyberabuse. As she shows, we can do quite a lot for victims of cyberabuse without chilling expression… Citron confronts the perpetual free-speech/First Amendment problems attendant to her family of proposals head-on, and the case she makes is persuasive… Citron makes a number of useful proposals for legal reform while convincing readers of the seriousness of the problem." **—Martha C. Nussbaum**, *The Nation*

"Danielle Citron's *Hate Crimes in Cyberspace* is a breakthrough book. It has been compared, and with good reason, to Catherine MacKinnon's *Sexual Harassment of Working Women.* The book makes three major contributions. All are central to furthering the equality of women and men both in cyberspace and elsewhere. The book thus serves as a blueprint for what Citron insightfully calls a new civil rights movement. It gives legal representatives and victims a roadmap for charting out legal actions that can be taken to halt the abuse being currently suffered, and to compensate for past harms. It gives state and federal legislators a menu of options for strengthening the law in this area, so that cyberspace can be a safe as well as robust domain for the expression of views on all subjects. It responds to First Amendment worries about the possibility that her proposed reforms might chill valuable speech, and it suggests paths for interested private parties who want to affect the trajectory here outside the law. It's a *tour de force* and I believe it will succeed. It will change the law, change the conversation, and change attitudes toward and regarding this extraordinarily abusive and harmful behavior. It will strengthen women's civil rights, and thus strengthen women's equality and at core, it will be a significant step toward ensuring women's safety in the public space of employment and education, as well as in cyberspace and the home. This is a book to celebrate, to study, to argue over, and, mostly, to use." **—Robin West**, *Jotwell*

"Citron…focuses on how online hate speech ruins lives, most often women's lives. She cites surveys that show that 60 to 70 percent of cyber stalking victims are women, and she details cases in which women have been targeted, defamed, and threatened with rape and murder…The very same things that make the Internet such a uniquely powerful medium for freedom of speech make it a uniquely powerful medium for hate crimes…The difficult question--as always in First Amendment and most constitutional litigation--is where to draw the line. In grappling with that and offering provisional answers, Citron [does] a great service." **— Erwin Chemerinsky,** *Chronicle of Higher Education*

"This book sets forth a compelling argument that the internet should not be allowed to maintain its 'Wild West' anarchic status, because its ability to facilitate cyber-bullying outweighs the virtues of maintaining that status… *Hate Crimes in Cyberspace*'s main strength lies in its sustained and detailed exploration of the bizarrely convoluted, sustained and extremely hurtful nature of online abuse of individuals… Its pioneering research could and should be used to support the case for introducing a criminal offence of gender-based hate speech in various countries." **—Helen Fenwick**, *Times Higher Education*

"To be sure, police and prosecutors regularly fail to enforce existing laws when it comes to online abuse, either because they don't take the abuse seriously or because they lack the technological skills to find the perpetrators. But while better training and more resources are certainly necessary, Citron argues persuasively that the law itself needs to evolve as well." — **Michelle Goldberg**, *The Nation*

"Anyone with an Internet connection should read this book—particularly legislators, judges, law enforcers, teens, parents, and educators. For one, they will benefit from the consolidated lexicon incidental to it (e.g., cyber-cesspools, trolling, lulz, doxxing, information cascade, smart mobs, Google-bomb, transient anonymity, heckler's veto, and digital citizenship). More importantly, those most instrumental in creating a safe digital climate—politicians, judges, and law enforcers—are those whose jobs least rely on the Internet. This book, the equivalent of cyber-Lasik, focuses the blur." **Carrie Goldberg**, *New England Law Review Online*

"An impassioned call for equal rights for women on the Internet. . . . Citron offers well-considered and modest changes to communications law and judicial procedure that could go a long way toward opening the Internet to safer and wider use by currently victimized groups. Her suggestion that anonymity online should be treated as a privilege that can be lost by violations of a site's terms of service is particularly constructive… Frightening and infuriating, this demand for legal accountability for Internet barbarism deserves widespread exposure and serious consideration." —*Kirkus Reviews* (starred review)

"Citron addresses a significant, timely topic in this impressively comprehensive, expertly researched book. . . . An excellent analysis of the social impact of Internet hate crimes." —**Lynne Maxwell**, *Library Journal* (starred review)

"There sometimes seems to be a river of hate on the internet, flowing steadily through different social media; people are often hurt, and there is no obvious end to it. In this book, Danielle Citron, an American law professor, proposes, with quiet authority, how we, as digital citizens, lawmakers, internet intermediaries and educators, can make a change." —**Katharine Quarmby**, *The Guardian*
